BRIGHTLEARN DATA ANALYTICS

Case Study : Hospital Readmission Analysis

Task:
Analyze the **patient readmission dataset** and present meaningful insights to the **Hospital Head Doctor**.

Instructions:

- You may use **any tools** you prefer for analysis and visualization.

- Each student must perform their **own unique analysis** , explore the data from your own perspective.

- Identify trends, patterns or factors behind patient readmissions.

- Provide **data-driven recommendations** to improve hospital performance and patient care.

- Submit your work via **GitHub**.

Goal:
Show your ability to independently explore data, draw insights, and communicate findings clearly and professionally.
